DISCHARGE SUMMARY

Patient Name: Aisha Patel	DOB: August 29, 1957 (Age 50)
MRN: MRN-8245685	Gender: Male
Admission Date: May 18, 2025	Discharge Date: April 20, 2025 (8 days)
Attending Physician: Dr. Emily Brooks, MD — Rheumatology	Insurance: BlueCross BlueShield #BCB-779-00234

DIAGNOSES

Primary Diagnosis	ICD-10 Code	Status
Hyperlipidemia	E78.5	Chronic / Pre-existing
Gastroesophageal Reflux Disease (GERD)	K21.9	Chronic / Pre-existing
Chronic Obstructive Pulmonary Disease (COPD)	J44.9	Chronic / Pre-existing
Acute ST-Elevation Myocardial Infarction (STEMI) — Anterior Wall	I21.09	Resolved

HOSPITAL COURSE

Aisha, a 50-year-old male with a known history of Type 2 Diabetes and Hypertension, presented to the Emergency Department on May 18, 2025 via ambulance with a 2-hour history of severe substernal chest pain radiating to the left arm, diaphoresis, and nausea. Initial ECG demonstrated ST-segment elevation in leads V1–V4 consistent with anterior STEMI. Troponin-I on arrival was critically elevated at 24.6 ng/mL. The patient was taken emergently to the cardiac catheterization laboratory where coronary angiography revealed 99% occlusion of the left anterior descending (LAD) artery. Successful percutaneous coronary intervention (PCI) was performed with deployment of a drug-eluting stent (Xience Skypoint 3.0 x 28mm). Post-procedural TIMI flow was grade 3. The patient was transferred to the Cardiac Care Unit (CCU) for monitoring. Serial echocardiography on day 2 showed an ejection fraction of 44%, mild anterior wall hypokinesis. Mild acute kidney injury (Creatinine 1.6 mg/dL) was noted, attributed to contrast nephropathy; this resolved with IV hydration by day 4. Blood glucose remained elevated throughout admission and endocrinology was consulted to optimize insulin regimen. The patient remained hemodynamically stable throughout and was discharged on day 8 in stable condition with close outpatient follow-up arranged.

VITALS AT DISCHARGE

BP	HR	SpO2	Temp	RR	Weight
142/71 mmHg	69 bpm	100% (RA)	98.5°F	20/min	78 kg

DISCHARGE MEDICATIONS

Medication	Dose	Frequency	Duration
Aspirin	81 mg	Once daily	Indefinite
Clopidogrel (Plavix)	75 mg	Once daily	12 months
Atorvastatin	80 mg	Once at bedtime	Indefinite
Metoprolol Succinate	50 mg	Once daily	Indefinite
Lisinopril	10 mg	Once daily	Indefinite
Insulin Glargine (Lantus)	23 units	Once daily at bedtime	Ongoing — follow with Endo
Metformin	500 mg	Twice daily with meals	Ongoing

FOLLOW-UP PLAN

Cardiology: Dr. Forsythe — 1 week post-discharge. Repeat Echo at 6 weeks.
Endocrinology: Dr. Patel — 2 weeks post-discharge for diabetes management.

Primary Care: Dr. Kim — 4 weeks. Renal function panel to confirm AKI resolution.
Cardiac Rehab: Enrollment arranged — starts June 25, 2025 at MetroGen Rehab Center.
Labs: BMP, HbA1c, Lipid Panel — 2 weeks post-discharge.
